

# U.S. Microwaveable Packaging – 2009 to 2013

## Table of Contents

---

### Section I:

#### Introduction

- A. Microwaveable packaging defined
- B. Study organization
- C. Geographic regions
- D. Methodology
- E. Conventions

### Section II:

#### Executive Summary

- A. Market drivers and trends
  - 1. Product expansion
  - 2. Convenience where its needed
- B. Market statistics and projections
  - 1. End-use
  - 2. End-use summary
  - 3. Distribution temperature
  - 4. Heating method
  - 5. Package type
  - 6. Materials
- C. Technology
  - 1. Vents
  - 2. Susceptors
- D. Economics and environmental
  - 1. Recycled PET analysis
  - 2. Take-home food packaging

### Section III:

#### Technology

- A. Microwave cooking
  - 1. Commercialization
  - 2. Impact on packaging
- B. Package designs

- C. Rigid trays
  - 1. Dual-ovenable rigid trays
  - 2. Microwave-only rigid trays
- D. Bowls and cups, microwaveable-only
  - 1. Barrier bowls and cups
  - 2. Production methods
  - 3. Suppliers
  - 4. Non-barrier bowls and cups
- E. Flexible packaging
  - 1. Popcorn bags
  - 2. Cook-in pouches
  - 3. Pouches for steaming
  - 4. Stand-up pouches
  - 5. Delicatessen foods
  - 6. Bacon packaging
  - 7. Lids
  - 8. Labels
  - 9. Shrink wrap
  - 10. Suppliers
- F. Miscellaneous
  - 1. Bottles
  - 2. Metal containers
- G. Material selection and use
  - 1. Use of metal
  - 2. Recycled PET resins
  - 3. Biodegradable resins
  - 4. Temperature capabilities of materials
  - 5. Barrier properties
  - 6. Material selection
- H. Susceptors
  - 1. Process control
  - 2. Patterned susceptors
  - 3. Manufacturing advances
  - 4. Uses in finished packaging
  - 5. Suppliers
- I. Vents and patches
  - 1. Integral vents
  - 2. Discrete vents
  - 3. Gas transmission patch
- J. Packaging filling and sealing
  - 1. Tray filling and sealing
  - 2. Thermoform/fill/seal
  - 3. Bowl filling and closing

- 4. Horizontal form/fill/seal
- K. Food safety

## **Section IV:**

### **Economics and Environmental**

- L. Case 1: Manufacture a CPET tray from 100% virgin resin
  - 1. Assumptions
  - 2. Economic results
  - 3. Environmental results
- M. Case 2: Manufacture a CPET tray with 40% recycled resin
  - 1. Assumptions
  - 2. Economic results
  - 3. Environmental results
- N. Case 3: Comparison of Case 1 and Case 2
  - 1. Economic comparison
  - 2. Environmental comparison
- O. Case 4: Manufacture an expanded polystyrene (EPS) container
  - 1. Assumptions
  - 2. Economic results
  - 3. Environmental results
- P. Case 5 - Manufacture a polypropylene (PP) tray and lid container
  - 1. Assumptions
  - 2. Economic results
  - 3. Environmental results
- Q. Case 6 – Manufacture a paperboard container
  - 1. Assumptions
  - 2. Economic results
  - 3. Environmental results
- R. Case 7: Comparison of Case 4, Case 5, and Case 6
  - 1. Economic comparison
  - 2. Economics - Discussion of overall results
  - 3. Environmental comparison
  - 4. Environmental – Discussion of overall results

## **Section V:**

### **Market Trends and Projections**

- A. Microwaveable packaging applications
- B. Drivers in the retail segment
  - 1. Time savings
  - 2. Convenience
  - 3. Taste and texture

4. Health and fitness
5. Price
- C. Drivers in the foodservice industry
  1. Time savings
  2. Convenience
  3. Price
- D. Primary packaging units segmented by end-use
  1. Prepared meals
  2. Dinners
  3. Entrees
  4. Hand-held entrees
  5. Pot pie
  6. Baby food
  7. Vegetables
  8. Sandwiches and flatbreads
  9. Soup and chili, wet
  10. Soup, dry
  11. Pasta
  12. Pizza
  13. Popcorn
  14. Snacks
  15. Bakery
  16. Dessert and toppings
  17. Breakfast
  18. Other
  19. Projection
- E. Primary packaging dollars segmented by end-use
- F. Microwave packaging segmented by distribution temperature
  1. Frozen
  2. Refrigerated
  3. Ambient
- G. Microwave packaging segmented by cooking method
  1. Dual-ovenable packaging
  2. Microwave-only packaging
  3. Projection
- H. Microwave packaging segmented by package type
  1. Trays
  2. Bowls and cups
  3. Flexible packaging
  4. Other
  5. Package formats in a support role
- I. Microwave packaging segmented by barrier versus non-barrier
  1. Non-barrier packaging

- 2. Barrier packaging
- J. Materials
  - 1. Paperboard
  - 2. Polyester (PET) resin
  - 3. Monolayer Polypropylene
  - 4. Barrier structures
  - 5. Paper
- K. Susceptors
  - 1. Applications
  - 2. Projection
- L. Vents
  - 1. Applications
  - 2. Projection

**Section VI:**

**Packaging Supplier Profiles**

**Section VII:**

**Glossary**
